

`stats::lm() fit`

1. User-facing API

`vcov_hc()`: covariance workflow
`hcinfer()`: Wald tests and intervals
`boot_pairs()`: pairs bootstrap
`gls_mult()`: multiplicative-variance FGLS
`hc_methods()`: method defaults

2. Computational core in R/

`model-info.R`: X , residuals, leverage
`hc-weights.R`: HC weights g_t
`vcov-hc.R`: sandwich covariance
`hcinfer.R`: coefficient table
`boot-pairs.R`: pairs bootstrap
`gls-mult.R`: feasible GLS

3. Returned objects and S3 methods

`hcinfer_vcov`: covariance diagnostics
`hcinfer`: tests and intervals
`hcinfer_boot`: bootstrap replicates
`gls_mult`: FGLS mean and dispersion
`vcov()`, `coef()`, `tests()`, `confint()`
`summary()`, `print()`, `plot()`
`logLik()`, `AIC()`, `BIC()`, `fitted()`, `residuals()`

Supporting infrastructure

Support files

validation
