

`stats::lm() fit`

1. User-facing API

`vcov_hc()`: covariance workflow

`hcinfer()`: Wald tests and intervals

`hc_methods()`: method defaults

2. Computational core in R/

`model-info.R`: X , residuals, leverage

`hc-weights.R`: HC weights g_t

`vcov-hc.R`: sandwich covariance

`hcinfer.R`: coefficient table

3. Returned objects and S3 methods

`hcinfer_vcov`: covariance diagnostics

`hcinfer`: tests and intervals

`vcov()`, `coef()`, `tests()`, `confint()`

`summary()`, `print()`, `plot()`
